# Agenda 1. Elective recovery – national context 2. Local challenges 3. CLEAR 4. Reflections

## **Elective recovery challenges**

#### **Targets**

- June 2022 No waits > 2 years
- April 2023 No waits > 18 months
- March 2025
   No waits > 1 year

#### Priorities

- Increase capacity
- Clinically prioritise
- Diagnostic and surgical hubs
- **Empower patients**

## Queen Elizabeth Hospital, King's Lynn

Cardiology Service

#### **NHS** Health Education England

## Key challenges

How do we recognise, optimise and plan for a progressively higher risk population?

#### **Qualitative feedback**

- Increasing patient complexity is resulting in longer resulting in more complex care requiring longer periods of time.
- This trend is potentially resulting in under allocation of resources

#### Quantitative review

- Increasing proportion of mild systemic disease, ASA II (dark orange) and severe systemic disease, ASA III (light orange) as proportion of total patients
- Decreasing proportion of healthy, ASAI (light blue) patients
- As of 2021- 2022, there are now <u>a 10%</u> <u>larger cohort of ASA II, III, IV than there</u> were in 2017-2018

## **Key opportunities**

- Two thirds of late cancellations can be prevented with improved perioperative assessment and stronger hospital/patient engagement
- Trends of patient complexity is increasing and high risk patients now account for a 10% larger cohort compared to 2017
- Challenging peri-operative estates and admission processes can potentially lead to lost operating theatre time to the tune of 600 operating hours/ 160% increase in hospital length of stay
- Trauma demand is exceeding trauma capacity resulting in overrunning lists and inefficient use of half day trauma lists
- Workforce satisfaction and career development opportunities should link to new models of care and workforce to improve recruitment and retention.

## **Projected impact**

- **Potential 12% productivity gain** if opportunities addressed
- Improved patient flow pre and post operatively using locally developed new models of care
- Workforce development opportunities improving workforce recruitment and retention e.g. Elective care coordinator role to validate and coordinate bookings with teams and patients.
- Reduction in late cancellations with better patient coordination and communication
- Optimised use of trauma capacity through better organised full day sessions
- Improved patient care through enhanced patient contact during pre-operative journey supported by early specialist input.

Elective (65	0 20 40 9) <b>1</b>	60 80 100 Legend	120 140 160	180 200 220	Total	1,499	14,996, 100%	1,356	16,020,100%	Elective (38)	0 10 20 30 )	40 50 60 70 Legend	80 90 100 110	120 130 140 150

- In the top 10 most performed T&O elective and non-elective procedures, inpatient LOS from 2018 to 2019 compared with 2021 to 2022
- Despite less patients having operations post COVID-19, there is a larger proportion of patients staying more than 5 days. (~5%)
- A LOS of more than 5 days is likely to result in increased hospital costs and reduced elective operating capacity the following week (in the context of an already constrained elective bed base)
- The increase in patients who stay 5 days or more equates to an extra 1,568 admission days, resulting in an additional 4 beds per year, costing circa £600,000 per year

#### **NHS** Health Education England

## **Key opportunities**

#### Systems and processes

Booking, validating, optimising, coordinating and communicating with patients for surgery

- Hospital capacity and patient flow
   Ensuring continuous patient flow to minimise disruption to planned
   care bed base
- Patient complexity and COVID-19
   Recognise increasing complexity to allow planning with appropriate
   resource allocation
- Workforce recruitment and retention Developing workforce roles and responsibility to deliver better patient care

## **Projected impact**

- **10% productivity gain** in the number of cases performed across all engaged specialities valued at c£1.4m
- **Reduced hospital length of stay** through implementation of seven-day physiotherapy service, gaining up to £629,600
- Integration of new technology (CCS) into normal working practices
- Further workforce development opportunities improving workforce recruitment and retention e.g. Elective care coordinator role to validate and coordinate bookings with teams and patients.
- Reduction in late cancellations with better patient coordination and communication
- Improved patient care through enhanced patient contact during pre-operative journey supported by early specialist input.
